COMMUNITY AIRCRAFT EXPANSION

Welcome to the Sufa family.

The DCMii F-16 Sufa Mod is a community-built expansion for DCS World. It brings additional F-16 variants, custom weapon and fuel-tank configurations, cockpit additions and liveries into the simulator.

In-game view / Flight at sunset

THREE F-16 FAMILIES

F-16CM / F-16D / F-16I SUFA

New in 3.2.0: SPICE 2000, a matching CFT configuration, Default Gray liveries for the F-16D family, updated CFT textures and smaller package sizes.

Unofficial community project. Not an Eagle Dynamics product.

Meet the aircraft

Choose a variant, then explore its supported liveries and configurations.

F-16CM

SINGLE SEAT

A modernized single-seat F-16 option with expanded loadouts and cockpit additions.

F-16D

TWO SEATS

Dual-seat F-16 and Barak variants, now with Default Gray liveries for all D variants.

F-16I SUFA

TWO SEATS

An Israeli-inspired dual-seat variant with conformal fuel tanks and custom configurations.

WHAT YOU CAN EXPLORE

Weapons & configurations

SPICE 2000 joins the custom weapon options. Python-5 and AGM-154B are also available through the relevant packages. V3.2.0 includes a SPICE 2000 CFT configuration.

Liveries & visual updates

Israeli, Bulgarian and Hellenic Air Force-inspired skins, plus the new F-16D Default Gray liveries. Default F-16D liveries now have CFT textures, and the nose sensor-cover texture has been corrected.

Cockpit additions

The Center Pedestal Display (CPD) and the DMS / SOI control improvements from the previous release remain part of the mod.

A few terms, explained

CFT: Conformal Fuel Tank - an external tank fitted closely to the fuselage.
Livery: the aircraft’s paint scheme or skin.
WSO: Weapon Systems Officer - the rear-seat crew role.

Your first flight

Install first, check your setup, then start with a simple mission.

FIRST: RE-DOWNLOAD THE SUFA INSTALLER

Get a fresh copy of the **Sufa Installer** from **#mod-download** before downloading V3.2.0. Older versions cannot download this release.

01 Download and install

Get the main ZIP and, if you want the additional skins, the livery ZIP. Follow the companion **V3.2.0 Installation Instructions** for the exact folder paths and update steps.

02 Choose a supported aircraft and livery

Start DCS after enabling the main packages in OvGME. Choose an F-16CM, F-16D or F-16I Sufa variant and select a livery intended for that aircraft.

03 Check controls in a simple mission

Check your control bindings, including DMS if needed. Begin with a simple test mission so you can confirm that the aircraft, cockpit controls and selected skin load correctly.

GOOD TO KNOW BEFORE YOU FLY

Is the rear seat fully functional?

Not yet. Multiplayer rear-seat access exists, but advanced WSO displays and avionics controls remain in development.

Will the mod pass multiplayer Integrity Check?

Not necessarily. The main packages modify the DCS installation, so IC-restricted servers may reject them. Check the server’s rules before joining.

Can I combine every weapon and CFT loadout?

No. Use supported configurations. Some combinations require matching bombs; experimental 3+3 TER configurations are not supported. The new SPICE 2000 CFT option does not imply unrestricted mixed loadouts.

Need help? Include your mod version, aircraft variant, installation path and a screenshot when reporting a problem to the DCMii community.
