V3.1

DMS & CFT HOTFIX

Dual-seat control restoration • CFT livery compatibility

01 BUG FIXES

- **Dual-seat DMS / SOI restored**
  Fixed DMS input and normal HUD / MFD SOI control for the F-16D family and F-16I Sufa, including previously unresponsive Left / Right / Down commands.
- **F-16CM CPD operation preserved**
  Retained the single-seat DMS-to-CPD integration while restoring native DMS behavior in two-seat cockpits.
- **Israeli CFT camouflage texture loading**
  Corrected livery material assignment and Lua syntax for Israel CFT Camo, removing the missing / fallback CFT texture behavior.
- **Hellenic Air Force CFT textures**
  Remapped HAF CFT textures to the IDF model UV atlas; black seams and camouflage alignment fixed on 337, with 340 prepared for final in-game testing.

02 ADDED & UPDATED

- **Integrated dual-seat DMS relay**
  The verified relay is now integrated into the main Sufa mod package. A separate OvGME DMS relay add-on is no longer required.
- **HAF livery compatibility assets**
  Updated CFT atlas and material references for HAF 337SQN GHOST 515 CFT and HAF 340SQN ALEPPOU 522; original liveries by Roughmaster.

03 SCOPE & NOTES

V3.1 is a patch release focused on controls and visual compatibility.
Mixed CFT weapon loadouts, dual triple racks and advanced WSO MFD functions are not introduced by this update and remain future development items.
Do not combine V3.1 with obsolete experimental DMS test patches.
